

Make paperfree global cargo a reality.

eCargo Pouch®:

The need for eCargo Pouch®

Forwarders play a central role in managing the logistic supply chain in a rapidly-changing world. Competition is growing and globalization means that shipping cycles are extending and becoming more complex. This rising supply chain

complexity puts pressure on the role of the forwarder, where process speed and efficiency are vital. To manage these complexities and to maintain their key role in this supply chain, the forwarder needs innovative technical solutions,

enabling quicker and more efficient flows. The eCargo Pouch® is a new and innovative product facilitating the paperless exchange of shipment-documents and optimizing the administrative process. The eCargo Pouch® supports IATA's e-freight program.

Benefits

No extra investment is needed. By taking advantage of eCargo Pouch®, your company does not need to develop and maintain its own costly data management and archiving systems for air-cargo-related documents. Using the eCargo Pouch®, there is no need to invest in extra hardware, software or technical resources.

Easy implementation. The eCargo Pouch® is a user-friendly web-based application and its implementation is simple.

Global accessibility. Having one central database, eCargo Pouch® grants multiple recipients simultaneous access to all required freight documents. Worldwide data can be retrieved easily from a global database. Forwarders have unlimited access to a fully integrated and complete overview of their electronic data and trade documents; no physical documentation and archiving is needed. eCargo Pouch® data and documents are stored for a minimum of seven years.

Efficiency in processes. An electronic pouch is created for each master shipment. Electronic equivalents of transport documents (FWBs, FHLs and FZBs) are submitted automatically to eCargo Pouch® in the central database via EDI. Other documents for which no electronic messages are available can be uploaded in scanned form and incorporated in the respective eCargo Pouch®. eCargo Pouch® supports all forwarder processes from the first uploaded shipper documents through to changes made after releasing the shipment.

Earlier declarations. Destination forwarders (DFF) have the ability to generate import goods declarations earlier, and because there is greater information transparency, customs release is fast and easy for import authorities.

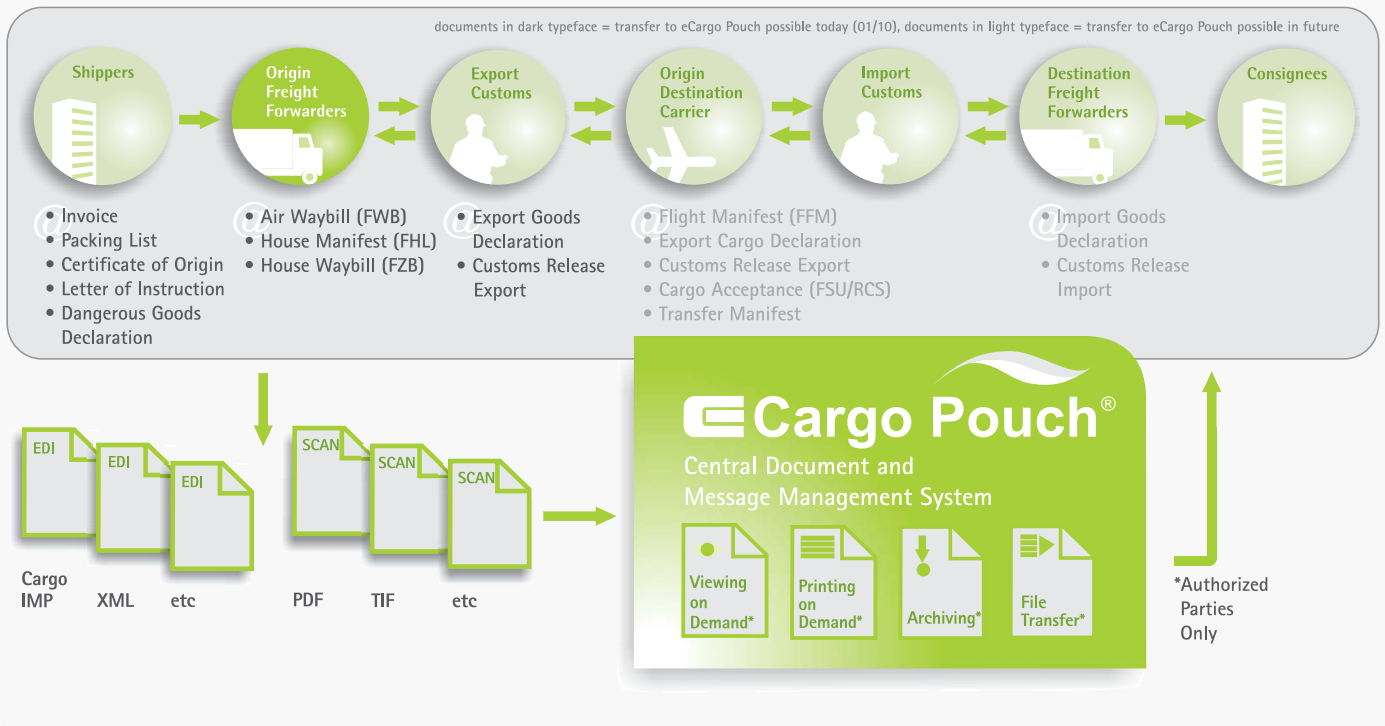

Ecological benefits. The eCargo Pouch® can facilitate paper-free cargo communication on a global basis, delivering impressive ecological benefits in line with Corporate Social Responsibility.

Origin Forwarders are 'in control' of their e-freight supply chain. Origin Forwarders (OFF) create, manage, authorize and release shipments to other stakeholders.

The eCargo Pouch® solution

eCargo Pouch® is a central document and message management system supporting paperless shipment in the air cargo industry. It enables the paper-free and rapid exchange of freight information across the entire supply chain while also including an archiving feature. As a web-based application, this globally-accessible database allows access to all participants in the supply chain. Authorized partners get a transparent overview of all documents made available by the origin forwarder. This applies to electronic messages and supporting documents like invoices and packing lists.

How it works for you (in 5 steps)

- 1) Send your electronic Airwaybill or Houswaybill.
- 2) Select shipment and choose counterpart (Destination Freight Forwarder).
- 3) Upload documents (link to AWB).
- 4) Authorize stakeholders (e.g. airlines).
- 5) Release e-freight shipment.

Why you should use eCargo Pouch®

eCargo Pouch® is a joint product of three renowned companies: CCN, Cargonaut and TRAXON Europe, who combined forces. These companies:

- ▶ have built up substantial experience in cargo community systems;
- ▶ have in-depth knowledge of EDI and state-of-the-art e-freight technology, resulting in this eCargo Pouch®;
- ▶ invest continuously in product development to cater to the ever-changing requirements of industry stakeholders;
- ▶ offer worldwide coverage and customer support for eCargo Pouch®.

eCargo Pouch® supports and complies with the recommendations of IATA's e-freight program.

* The trademark TRAXON is used with the consent of the owner

Please contact the respective eCargo Pouch® partner, if you are located in these regions:

- ▶ **CARGONAUT NEDERLAND B.V.:** Belgium, the Netherlands or Luxembourg
- ▶ **CCN:** Asia Pacific region
- ▶ **TRAXON EUROPE:** All other countries (including India)
